## **Introduction**

Effective project requirements are pivotal for success, necessitating a thorough understanding of stakeholders' needs and clear specification translation. Our project, centred on developing a game simulating the final exam week for second-year computer science students, followed a systematic approach.

We began by brainstorming relevant questions to discern specific game requirements from the stakeholders, non-functional requirements and constraints, which were not fully detailed in the brief. We came up with a range of questions, including platform requirements, ethical considerations, and graphic style:

- Functional requirements:
  - Type of input/controls?
- Non-functional requirements:
  - Graphics style?
- Constraint requirements:
  - Systems it should run on?

The following stakeholder interview provided valuable insights, refining our understanding of their needs. Active engagement and questions improved our Single Statement of Needs (SSON) and identified clear user requirements.

The SSON, "To build a single-player game managing activities of a second-year computer science student in the final exam week", provided to us by the stakeholders, guided our requirement elicitation process, encapsulating core project objectives.

Drawing from resources such as the IEEE guide [1] on software requirements specifications, we formulated the requirements. After researching, we decided on the MoSCoW method [2] to decide the importance of each requirement.

To present requirements effectively, we utilised a tabular format for readability and adaptability, outlining constraints and use cases to align with stakeholders' goals. The following requirements have been reiterated throughout the development process, and now completely cover every aspect of the game. Each record has a unique ID, and represents a unique requirement.

## User Requirements

ID	Description	Notes	Priority
<b>UR_AVATAR_SELECT</b>	The user must have the ability to select from a variety of avatars for aesthetic purposes.	The selection should include at least three diverse avatar options.	<b>Must</b>
<b>UR_ACTIVITY_CHOICE</b>	The user must be able to select from multiple activities to engage in at any time during the day.	The activities should cover a range of options relevant to a student's final week before exams.	<b>Must</b>
<b>UR_MOVEMENT</b>	The user must have the capability to move their character in all four directions (left, forward, right, back).	The control scheme (WASD) should be clearly communicated to the user prior to the game's start.	<b>Must</b>
<b>UR_ACTIVITY_AMOUNT</b>	The game should provide options to control the duration and frequency of study and relaxation periods.	The user has full control on what type of activities they do and when.	<b>Should</b>
<b>UR_INTERACTION</b>	The user must be able to interact with buildings and items to perform various activities.	Clear instructions regarding interaction controls must be provided to the user before the game starts.	<b>Must</b>
<b>UR_GAME_LENGTH</b>	The game duration should be between 5 to 10 minutes, with each in-game day lasting approximately 1 minute.	The game should automatically advance from 9pm to 9am, simulating sleep, after 12 hours of activity.	<b>Should</b>
<b>UR_UX</b>	The user experience should be enjoyable and engaging, promoting immersion and fun.	Subjective metric associated with user satisfaction and enjoyment. Associated with Risk 14.	<b>Must</b>
<b>UR_GAME_END</b>	The game ends after the completion of 7 in-game days.	The win condition should be clearly communicated to the user.	<b>Must</b>
<b>UR_ACTIVITY_LENGTH</b>	Each activity should have a duration ranging from 1 to 3 hours.	Users should be informed that different combinations of activities result in different scores.	<b>Should</b>
<b>UR_SLEEP</b>	The user should have the option to initiate sleep and skip to the	Access to the sleeping area must be provided to the user.	<b>Should</b>

	next day at any point during gameplay.		
--	----------------------------------------	--	--

### **Functional System Requirements**

<b>ID</b>	<b>Description</b>	<b>User Requirement</b>
<b>FR_CHOOSE_AVATAR</b>	The system must allow the user to select an avatar from a set of options before starting the game.	<b>UR_AVATAR_SELECT</b>
<b>FR_INPUT_DETECTION</b>	The system must accurately detect and respond to user input, including key presses and selections.	<b>UR_MOVEMENT, UR_INTERACTION</b>
<b>FR_GAME_DURATION</b>	The game must run for a duration of 5 to 10 minutes.	<b>UR_GAME_LENGTH</b>
<b>FR_SLEEP</b>	The system must automatically simulate sleep between 9pm and 9am after 12 hours of activities.	<b>UR_ACTIVITY_LENGTH</b>
<b>FR_ENERGY_ACTIVITY_COUNT</b>	The system must adjust the energy level based on completed activities.	<b>UR_ACTIVITY_CHOICE</b>
<b>FR_HAPPINESS_ACTIVITY_COUNT</b>	The system must adjust the happiness level based on completed activities.	<b>UR_ACTIVITY_CHOICE</b>
<b>FR_STUDY_ACTIVITY_COUNT</b>	The system must adjust the happiness level based on completed activities.	<b>UR_ACTIVITY_CHOICE</b>
<b>FR_UI</b>	The user interface must meet user expectations in terms of clarity and usability.	<b>UR_UX</b>

### **Non-Functional System Requirements**

<b>ID</b>	<b>Description</b>	<b>User Requirement</b>	<b>Fit Criteria</b>
<b>NFR_GAME_LENGTH</b>	The game should be played within a reasonable time frame.	<b>UR_GAME_LENGTH</b>	The average game duration should not exceed 10 minutes.
<b>NFR_RESPONSIVE</b>	The system should respond quickly and	<b>FR_INPUT_DETECTION</b>	The system should register and respond to user inputs within 100 milliseconds.

	accurately to user input.		
<b>NFR_ACCESIBLE</b>	The system should be adaptable to accommodate accessibility needs in the future.		The game's user interface should comply with accessibility standards and support future enhancements.
<b>NFR_PLAYABLE</b>	The game should run smoothly without any technical issues or crashes.		The game should undergo thorough testing to ensure stability and reliability.

### **Constraints**

<b>ID</b>	<b>Description</b>	<b>Type</b>
<b>CR_PROJECT_LEGAL</b>	The game development process must comply with all relevant legal regulations and requirements, including licensing agreements.	Project
<b>CR_DESIGN_GOAL</b>	The design of the game must align with the overall project goals and objectives.	Design
<b>CR_PROJECT_FINANCE</b>	The project budget (minimal spending) must be adhered to throughout development.	Project
<b>CR_TIME</b>	The project must be completed within the timeframe specified by the stakeholder.	Project
<b>CR_DESIGN_TECH</b>	The game design must utilise appropriate technology to meet performance and functionality requirements specified by the stakeholder.	Design
<b>CR_LANGUAGE</b>	The game must be developed using appropriate language to reach the target audience effectively.	Design
<b>CR_ACCURATE</b>	The game must realistically represent the experiences of a second-year computer science student.	Design
<b>CR_APPROPRIATE</b>	The game content must be appropriate for players aged 15+ and all cultural backgrounds.	Design
